

Helios Energy

Annual Report — Fiscal 2024

Helios Energy develops and operates utility-scale solar generation and battery-storage assets across the southwestern grid. In fiscal 2024 the company brought 1.2 gigawatts of new capacity into commercial operation and reported total revenue of \$679 million.

Revenue by quarter was \$140 million in Q1, \$158 million in Q2, \$205 million in Q3, and \$176 million in Q4; the third-quarter peak reflects maximum summer solar output and elevated grid-balancing payments.

Solar generation accounted for \$512 million of revenue, battery storage \$121 million, and grid services \$46 million. The storage segment grew fastest as arbitrage revenue from time-shifting midday solar into evening peaks more than doubled year over year.

Helios funds growth through a mix of long-term project debt and tax-equity partnerships; rising interest rates remain the principal headwind to new project economics.

Management targets 1.5 gigawatts of additional capacity in fiscal 2025 and expects storage to reach 25% of total revenue by 2027.

Quarterly Revenue

Quarter	Revenue (\$M)
Q1	140
Q2	158
Q3	205
Q4	176

Revenue by Segment

Segment	Revenue (\$M)
Solar generation	512
Battery storage	121
Grid services	46
