

Northwind Robotics

Annual Report — Fiscal 2024

Northwind Robotics designs and manufactures autonomous mobile robots for mid-market warehouse and logistics operators. In fiscal 2024 the company generated total revenue of \$425 million, up 37% from \$310 million in 2023, and expanded operations into two new geographic regions.

Quarterly revenue grew steadily through the year: \$82 million in Q1, \$95 million in Q2, \$110 million in Q3, and \$138 million in Q4, reflecting strong holiday-season fulfillment demand and the launch of the third-generation picking arm, Vega-3.

By segment, Hardware contributed \$289 million, Software subscriptions \$96 million, and Services \$40 million. Management's strategy centres on recurring software revenue: every robot now ships with a subscription fleet-management platform, lifting gross margin from 41% to 48% year over year.

Key risks include supplier concentration for precision actuators, where two vendors account for over 70% of supply, and intensifying competition from incumbent material-handling manufacturers.

For fiscal 2025, Northwind guides to revenue between \$520 million and \$560 million, driven by international expansion and higher software attach rates across its installed fleet.

Quarterly Revenue

Quarter	Revenue (\$M)
Q1	82
Q2	95
Q3	110
Q4	138

Revenue by Segment

Segment	Revenue (\$M)
Hardware	289
Software subscriptions	96
Services	40
